

Our mission is to advance progress to a low carbon emission future through *integration* and *innovation* of heating and cooling technologies.

Why heating and cooling? 44% of delivered energy used in the UK in 2011 was used for heating, c. 16% electricity used for cooling.

Our target is to identify feasible solutions to meet the 80% reductions needed by 2050.

How will we achieve this? Bring together experts in Business, Consumer Behaviour and Technology. Deliver technology advances informed by behaviour, business and infrastructure constraints. Disseminate results to business, government and consumers.
